The invention relates to a novel antibody or its fragment, which immunospecifically binds tumour necrosis factor Delta (TNF-delta/APRIL). The antibody of the invention has dermatological, immunosuppressive, antiallergic, antiatheumic, antiarthritic, cytostatic, antianaemic, antiallergic, antiasthmatic, neuroprocective, ophthalmological, entiateriosclerotic, antiasthmological, contiateriosclerotic, antipopric, thyromimetic, and haemostatic activity. The antibody or its fragment are useful for treating, preventing or ameliorating cancer such as Non-Hodgkin's lymphoma or multiple myeloma in the sease or disorder such as autoimmune disease, and graft versus host disease (GVHD). The autoimmune disease, and graft versus cerythematosus, rheumatoid arthritis or Sjogren's syndrome. The antibody is useful for detecting, diagnosing, prognosing, treating, preventing or ameliorating a disease or disorder associated with abstrant ARRIL or ARRIL receptor expression or aberrant function of ARRIL or ARRIL receptor as autoimmune entitoped autoimmune and inflammatory allowing anthem allowing antennal interopendation or antennal antennal disposition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            asthma, allergic encephalomyelitis, myocarditis, multiple sclerosis, uveitis, tuberculosis, diabetes mellitus, psoriasis, cancer of the immune system, particularly B cell cancers, immune disorders such as myasthenia gravis, Hashimoto's disease, immunodeficiency syndrome, Bruton's disease, immunodeficiency syndrome, Bruton's disease, infectious diseases (e.g. acquired immunodeficiency syndrome (AIDS)), and proliferative disorders (e.g. leukemia). The present sequence represents the tumour necrosis factor TRAIL
                                                                                                                                                                                                                                                                                                                                            Novel isolated antibody that immunospecifically binds tumor necrosis factor delta, useful for treating, preventing or ameliorating Non-Hodgkin's lymphoma, multiple myeloma, rheumatoid arthritis or Sjogren's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Page 216-217; 225pp; English.

Novel antibody useful for treating cancers and other hyperproliferative disorders, immunospecifically binds to TRAIL receptor and comprises variable heavy or light chain complementarity determining regions.

Disclosure; Page 300-301; 301pp; English.

The present invention relates to novel antibodies that immunospecifically bind to TRAIL receptor (TR4). Sequences of the invention are useful for bind to TRAIL receptor (TR4). Sequences of the invention are useful for treating preventing or ameliorating cancer (e.g. colon, breast, uterine, pancreatic, lung, gastrointestinal or central nervous system cancer e.g. medulloblastoma, neuroblastoma, glioblastoma and Kaposi's sarcoma) in thuman. They are useful for detecting expression of TR4 polypeptide and detecting, diagnosing, prognosing or monitoring cancers and other hyperproliferative disorders. Antibodies of the invention are useful for treating preventing or ameliorating neurodegenerative disorders (e.g. Alzheimer's disease, amyotrophic lateral sclerosis, retinitis pigmentosa, cerebellar degeneration and Huntington's disease), immune disorders (e.g. lupus, rheumatoid arthritis, multiple sclerosis, slopymyositis, immune-related glomenlonephritis, wastehenia gravis, disease, colymyositis, immune-related glomenlonephritis, wastehenia gravis, disorders (e.g. asthma, allergic disorders and rheumatoid arthritis), infectious diseases (e.g. acquired immunodeficiency syndrome (AIDS), herpes viral infections and other viral infections) and proliferative

```
(e.g. aplastic anaemia), ischaemic injury (such as that caused by stroke, myocardial infarction and reperfusion injury), septic shock, cachexia, anorexia and toxin-induced liver diseases (such as alcohol). They are also useful for treating cardiovascular disorders including peripheral artery diseases such as limb ischaemia, arrhythmia, congestive heart aliure and cardiovascular tuberculosis, diseases or disorders associated with neovascularisation and ocular disorders, for wound healing, for promoting anglogenesis and as adjuvants to enhance immune responsiveness to specific antisen e.g. viral antigen. They are also useful in the preparation or recovery from surgery, trauma, radiation therapy and transplantation. The present sequence is human TR4 ligand, TRAIL protein used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180

CV WHCDR1 (heavy chain variable domain complementarity determining region), CVHCDR1 (heavy chain variable domain complementarity determining region), CVHCDR1 (light chain variable domain complementarity determining region), VLCDR2 (light chain variable domain complementarity chain variable domain complementarity determining region), VLCDR2 or variable domain complementarity composed complementarity in the fragment of the apportance of TRAIL (tumour necrosis factor; TNF-related apportable inducing ligand) receptor 7 (TR7). TR7 is also referred to as TRAIL receptor 2 (TRAIL-R2), death receptor 5 (DR5) and KILLER. The antibody or its fragment is useful for treating, preventing or ameliorating a cancer, e.g. colon, breast, uterine, pancreatic, lung or gastrointestinal cancer of Kaposi's sarroma or cancer of the central nervous system such as medulloblastoma, neuroblastoma or graft versus host disease, AIDS (acquired immune deficiency syndrome) or graft versus host disease, AIDS (acquired immune deficiency syndrome) or therapy. The present sequence is human TRAIL.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
                                                                                                                                                                                                                                                                    The invention relates to a combination comprising cDNAs which are expressed in a disorder or process associated with DNA methylation. The combination and cDNAs are useful for diagnosing, staging, treating or monitoring treatment of cancer, e.g. colon cancer and for detecting changes in expression of genes encoding proteins that are associated with DNA methylation. The protein is useful for screening molecules or compounds to identify at least one ligand that binds to the protein and for producing an antibody. The present sequence represents the amino acid sequence of a protein expressed in a disorder or process associated with DNA methylation

The invention relates to a novel isolated Apo-2 ligand variant polypeptide having a sequence that differs from the native sequence beliably as sequence that differs from the native sequence baying 281 amino acids given in specification. The Apo-2 ligand variant polypeptide is selected from a polypeptide having substitutions at cresidue positions identified from x-ray crystal structure of the cresidue position(s) selected from 20 positions such as $96C, $101C, $111C, $114C, $115C, $114C, $113C, $114C, $113C, $114C, $113C, $101C, $111C, $114C, $113C, $114C, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240

A composition comprising the isolated antibody or its fragment is used for treating an individual in need of decreased level of endokine alpha activity. The endokine alpha polypeptide present in a heterotrimeric complex is used for treating an individual having a disorder associated with excessive bone resorption, e.g. osteoporosis, Paget's disease or arterial calcification. Treating an individual having a disorder associated with insufficient bone resorption comprises administering an endokine alpha antagonist, which is the antibody that binds specifically to endokine alpha polypeptide. The present into present the second of the protein present of the present in present in the present in the present of the protein protein the response of cells to treatment with a compound that modulates protein through a carryity or members of the protein tyrosine kinase pathway. Also described: (1) predicting whether a compound is capable of modulating the activity of cells, comprising obtaining a sample of cells, certaining whether the cells express and correlating the expression of the markers to the compound's ability to modulate the activity of the cells; (2) a plurality of cell lines for certaining whether the objections and polypetides whose expression levels correlate with compound sensitivity or resistance of cells associated with a disease state; and (3) identifying polymucleotides and (2) identifying polymucleotides and sensitivity or resistance of cells associated with a disease state, comprising subjecting the plurality of cell lines to one or more compounds, analysing the expression pattern of a microarray of polymucleotides or polypeptides, and selecting colymucleotides or polypeptides, and selecting colymucleotides or polypeptides that predict the sensitivity or resistance of cells associated with a disease state by using the expression pattern of the microarray of polymucleotides that credict the sensitivity or resistance of cells associated with a disease state by using the expression pattern of the microarray. The polymucleotides have cytostatic activities, and can be used in gene therapy. The polymucleotides and polypeptides are useful in predicting the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a predictor set comprising a plurality of

activity of compounds that interact with protein tyrosine kinases an protein tyrosine kinase pathways. These may be used in determining of sensitivity in patients to allow the development of individualized genetic profiles which aid in treating diseases and disorders (e.g. cancer) based on patient response at a molecular level. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g

implicated in certain disease states. Compounds which modulate the proteins of the invention may have cytostatic, antinflammatory, ophthalmological, antiarteriosclerotic or vulnerary activities. The sequences of the invention may be useful for gene therapy. The invention such as tumourigenesis, anglogenesis, appotosis, inflammation, erythropoiesis, or the biological response to hypoxia conditions including processes such as gytocolysis, gluconeogenesis, glucose transportation, catecholamine synthesis, iron transport or nitric oxide synthesis. The disease includes cancer, ischaemic conditions, reperfusion injury, retinopathy, neonatal stress, pre-eclampsia, atherosclerosis, inflammatory conditions or wound healing. The present sequence is that of a disease related protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

The invention relates to a composition comprising several cDNAs that are differentially expressed in a liver disorder. The composition is useful cor treating liver disorder such as hyperlipidaemia, hypertension, type II diabetes, tumours of the liver and disorders of the inflammatory and immune response. The composition is useful for a high-throughput method of specifically binds a cDNA. A protein encoded by the cDNA is useful for high-throughput method for using a protein to screen several molecules or compounds to identify at least one ligand which specifically binds the protein which involves combining the protein encoded by the cDNA with several of molecules or compounds to identify at least one ligand which specifically binds the protein and encoded by the cDNA with several of molecules or compounds to identify a ligand which specific binding, and detecting specific binding between the protein and a molecule or compound, therefore identifying a ligand which specifically binds the protein. The composition is useful for detecting and compound, therefore identifying a ligand which specifically changes the prognosis and to design a treatment regimen and to monitor the efficacy of treatment. The present sequence represents the amino acid a sequence of a protein encoded by a cDNA differentially expressed in a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to methods and compositions for treating or mealiorating a disease or disorder of the gastrointestinal tract. The method involves administering a composition comprising tumour necrosis factor (TNF)-gamma-beta and its receptors DR3 and TR6 to a person with, or suspected of having the disease or disorder. The antagonist of TNF-gamma-beta is useful for treathing or ameliorating a gastrointestinal tract disease or disorder, specifically an inflammatory bowel disease, eg. Crohn's disease or ulcérative colitis. The present sequence is human invention

The invention relates to a novel isolated Apo-2 ligand variant polypeptide, comprising a sequence that differs from the native sequence Apo-2 ligand polypeptide sequence comprising 282 amino acids and having one or more following amino acid substitutions at the residue positions comprising S96C, S101C, S111C, R170C or K179C. Also disclosed is an isolated nucleic acid molecule comprising DNA encoding the Apo-2 ligand variant polypeptide. Further disclosed are a composition comprising the Apo-2 ligand variant polypeptide, a method of treating cancer, and a method of inducting apoptosis in mammalian cells. The Apo-2 ligand variant polypeptide is useful for preparing a composition for treating cancer or immune-related disease, e.g., arthritis or multiple sclerosis. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note= "wild-type Ile may be substituted by Val or Leu at this location in the variant referred to in claim 17"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New Apo-2 ligand variant polypeptide, useful for preparing a composition for treating cancer or immune-related disease, e.g., arthritis or multiple sclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /note= "wild-type Asp may be substituted by Asn, Glu or
Gln at this location in the variant referred to in claim
17"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                              The invention relates to a novel isolated Apo-2 ligand variant polypeptide, comprising a sequence that differs from the native sequence Apo-2 ligand polypeptide sequence comprising 282 amino acids and having one or more following amino acid substitutions at the residue positions comprising S96C, S101C, R170C or K179C. Also disclosed is an isolated nucleic acid molecule comprising DNA encoding the Apo-2 ligand variant polypeptide. Further disclosed are a composition comprising the Apo-2 ligand variant polypeptide, a method of treating cancer, and a method of inducing apoptosis in mammalian cells. The Apo-2 ligand variant polypeptide is useful for preparing a composition for treating cancer or immune-related disease, e.g., arthritis or multiple sclerosis. The current sequence represents the human Apo-2 ligand amino acid sequence. Note: The variant sequence that is referred to in claim 1 may contain one or more of the potential substitutions highlighted in the features table

The invention relates to a novel isolated Apo-2 ligand variant polypeptide, comprising a sequence that differs from the native sequence Apo-2 ligand polypeptide sequence comprising 282 amino acids and having one or more following amino acid substitutions at the residue positions comprising S96C, S101C, S11C, R170C or K179C. Also disclosed is an isolated nucleic acid molecule comprising DNA encoding the Apo-2 ligand variant polypeptide. Further disclosed are a composition comprising the Apo-2 ligand variant polypeptide, a method of treating cancer, and a method of inducing apoptosis in mammalian cells. The Apo-2 ligand variant polypeptide is useful for preparing a composition for treating cancer immune-related disease, e.g., arthritis or multiple sclerosis. The Note: The variant sequence the human Apo-2 ligand amino acid sequence. Note: The variant sequence that is referred to in claim 2 may contain one or more of the potential substitutions highlighted in the features table
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240

Further disclosed are a composition comprising the Apo-2 ligand variant polypeptide, a method of treating cancer, and a method of inducing apoptosis in mammalian cells. The Apo-2 ligand variant polypeptide is useful for preparing a composition for treating cancer or immune-related disease, e.g., arthritis or multiple sclerosis. The current sequence represents the wild-type human Apo-2 ligand amino acid

The invention relates to a novel isolated Apo-2 ligand variant polypeptide, comprising a sequence that differs from the native sequence Apo-2 ligand bolypeptide sequence comprising 282 animo acids and having comprising s96C, 510IC, 811IC, R170C or K179C. Also disclosed is an isolated nucleic acid molecule comprising DNA encoding the Apo-2 ligand variant polypeptide. Further disclosed are a composition comprising the Apo-2 ligand variant polypeptide a method of treating cancer, and a method of inducing apoptosis in mammalian cells. The Apo-2 ligand variant polypeptide is useful for preparing a composition for treating cancer or immune-related disease, e.g., arthritis or multiple sclerosis. The current sequence represents the human Apo-2 ligand amino acid sequence. The variant sequence that is referred to in claim 10 may contain one or more of the potential substitutions highlighted in the features
New Apo-2 ligand variant polypeptide, useful for preparing a composition for treating cancer or immune-related disease, e.g., arthritis or

The invention relates to apoptosis inducing molecule-I protein (AIM-I)

comprising sequence that is 70 % identical to ADJ63976 or its mature form
where the polypeptide binds antibody specific to AIM-I, induces apoptosis

of cell line derived from pathological tissue and induces apoptosis of T

cells. Also included are a composition comprising AIM-I and a carrier,

AIM-I produced by a process involving expressing in a host cell a nucleic

acid that encodes the protein so as to produce the protein (where the

cold that encodes the protein so as to produce the protein (where the

nucleic acid is chosen from a polymucleotide encoding AIM-I, mature AIM
cold that encodes the protein so as to produce the protein (where the

nucleic acid is chosen from a polymucleotide that is complementary to

consisting of 0.5 X SSC (Salline-Sodium Cirrate) and 0.1 % sodium dodecyl

consisting of 0.5 X SSC (Salline-Sodium Cirrate) and 0.1 % sodium dodecyl

sulphate (SDS) to a polymucleotide chosen from polymucleotide encoding

mature/AIM-I, and a polymucleotide chosen from polymucleotide encodes a polypeptide that has the same biological

consisting peripheral toleposit No. 9748, where the

polymucleotide encodes a polypeptide that has the same biological

activity as described above). AIM-I is useful for treating

colding peripheral tolerance, destroying pathologic transformed cell

colding peripheral tolerance, destroying pathologic transformed cell

colding mature/AIM-I is useful for diagnosis and treatment of

inflammatory response, are useful for diagnosis and treatment of

discrets of cells, tissues and organisms. AIM-I is useful as research

colding in elucidating plology of autoimmume disorders including systemic

colding including including including including systemic

colding including including including including systemic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to antibodies specific to apoptosis inducing molecule-I (AIM-I) polypeptides. The invention is useful in research, biological, diagnostic, clinical or therapeutic applications. It is also used for modulating activation and differentiation of cells, both normally and in disease states, or for mediating apoptosis and preventing or treating autonmune diseases, graft-versus-host disease or lymphadenopathy. The invention is also useful in gene therapy. The present sequence is human AIM-I protein.

(or a fragment of human TRAIL protein of SEQ ID NO: 2 that induces apoptosis of Jurkat cells, a fusion protein comprising a leucine zipper peptide and a soluble TRAIL polypeptide (Comprising the extracellular domain) and a leucine zipper comprising ADKIS510-ADKIS513, an oligomer comprising at least two soluble TRAIL polypeptides (or at least two fusion proteins defined above), an antibody that specifically binds a TRAIL protein above and a method of inducing death of cancer cells (by an oligomer defined above). The TRAIL polypeptide is useful in studies of apoptosis, in regulating programmed cell death, for treating leukaemia, cancer (e.g. colorectal cancer) or viral infections, or in purifying leukaemic cells or a desired cell surface antigen which can be used in vaccine development. The TRAIL polypeptide may also be used in development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

polypeptide and the encoding polymuciocide useful in biological, diagnostic, clinical and therapeutic arts. The invention is useful in treating autoimmune disorders such as systemic lupus erythematosus, immunoproliferative disease lymphadenopathy (IPL), angioimmunoproliferative lymphadenopathy (IPL), rheumatoid arthritis, diabetes and multiple sclerosis, graft versus host disease, lymphaproliferative disease such as lymphadenopathy, in inhibiting neoplasis such as tumour cell growth, in treating restenosis and neoplasis such as tumour cell growth, in treating restenosis and neoplasis such as tumour cell growth, in treating restenosis and sequelting haematopoiesis in endothelial cell development. The invention is useful in chromosome identification and as a diagnostic marker for determining expression of AIM-I polypeptide in tumour cell lines including pancreatic tumour, endometrial tumour and T-cell lymphoma. The invention is also useful in gene therapy. The present sequence is human apoptosis inducing molecule I (AIM-I) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180

Sequence 281 AA; 

```
This invention relates to the novel association of protein sequences (and the genes which encode them) to the NP-kappaB pathway. The invention may be useful for the production of compounds with an antinflammatory, be useful for the production of compounds with an antinflammatory, cytostatic, hepatotropic, virucide, antiarteriosclerotic, antiasthmatic, antiasthmatic, antiasthmatic, antiarteriosclerotic, immunomodulator, cerebroprotective, vasotropic, immunosuppressive or vulnerary activity or for gene therapy. The proteins and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions or diseases associated with the NF-kappaB pathway. The condition is an immune disorder, an inflammatory disorder, an inflammatory disorder crelated to aberrant NF-kappaB regulation, cancer, aberrant apoptosis, related to aberrant NF-kappaB regulation, cancer, aberrant apoptosis, hepatic disorders, Hodgkin's Lymphomas, hematopoletic tumours, hyper-IgM syndromes, hypohidrotic ectodermal dysplasia, X-linked anhidrotic cetodermal dysplasia, immunodeficiency, viral infections, HIV-1, HTV-1, cetodermal dysplasia, immunodeficiency, viral infection, host cell survival, evasion of immune responses, rheumatoid arthritis, inflammatory bowel disease, colitis, asthma, atherosclerosis, cabcars related to oberrant acute phase responses, cypudicone, stroke, EAE, autoimmune disorders, disorders related to oberrant acute phase responses, hypercongenital conditions, birth defects, necrotic lesions, wounds, crejection, disorders related to aberrant acute phase response, hypercongenital conditions related to organ transplant rejection, disorders related to aberrant signal transduction, crejection, disorders related to aberrant signal transplant crejection, proliferating disorders related to aberrant signal transplant crejection, the novel association with the NF-kappaB pathway of the invention. Note: This sequence does not appear in the specification put
hepatic disorder; Hodgkin's lymphoma; haematopoietic tumour; hyper-ign syndrome; hypohidrotic ectodermal dysplasia; X-linked anhidrotic ectodermal dysplasia; immunodeficiency; viral infection; HIV-1; HTIV-1; hepatitis B; hepatitis C; EBV; influenza; viral infection; HIV-1; HTIV-1; hepatitis B; hepatitis C; EBV; influenza; rheumatoid arthritis; inflammatory bowel disease; colitis; asthma; atherosclerosis; cachexia; euthyroid sick syndrome; stroke; EAE; aberrant acute phase response; hypercongenital condition; birth defect; necrotic lesion; wound; organ transplant rejection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated polynucleotides and polypeptides associated with NF-kappaB pathway, useful for diagnosing, treating, or preventing disorders or diseases associated with NF-kappaB pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Carman J;

The present invention describes an antibody or its fragment comprising a VH and VL domain that is at least 80% identical to a VH and a VL domain of any of the 14 sequences given in SEQ ID NO:43 to 56, or a VH and a VL domain of an antibody expressed by any one of the cell lines contained in American Type Culture Collection (ATCC) Deposit numbers PTA-3571, PTA-3570 and PTA-3575, where the antibody specifically binds TR4 (TRAIL receptor). Also described is a pharmaceutical composition for treating or preventing haematological cancer, comprising the antibody or its fragment and a member selected from ibritumomab tiuxetan, imatinib mesylate, bortezomid, and a smac peptide or polypeptide. The antibody has cytostatic activity, and can be used in immunotherapy. The antibody or its fragment can be used for the preparation of a pharmaceutical composition for treating or preventing haematological cancer, e.g. Non-
                                                                                                                                                                                                                                                                                                                                                                antibody; VH domain; VL domain; TR4 binding antibody; TRAIL receptor; haematological cancer; cytostatic; immunotherapy; Non-Hodgkin's lymphoma; chronic myelogenous lymphoma; multiple myeloma; chronic lymphocytic leukaemia; scPv; human; TRAIL; TNF-related apoptosis-inducing ligand.

This invention relates to a novel method of inhibiting or treating a tumour, metastasis or infectious lesion in a subject which comprises administering into or near a site of a tumour or infectious lesion in a subject an antigen presenting cell and an immunostimulatory cytckine or a nucleic acid encoding the cytckine. The invention may be useful for the production of compounds with a cytostatic or vulnerary activity acting as immunomodulators. The method is useful in inhibiting or treating a tumour, metastasis or infectious lesion in a subject, where the size of the tumour, metastasis (where number is also decreased) or infectious lesion is decreased. The tumour is selected from melanoma, hepatoma, adenocarcinoma, colorectal cancer, basal cell cancer, head and neck cancer, renal cell cancer, laryngeal cancer, bladder cancer, head and neck cancer, renal call cancer, pancreatic cancer, pulmonary cancer, cervical cancer, cascer, residual cancer, oseophageal cancer, gastric cancer, prostrate cancer, testicular cancer and breast cancer. The present sequence is that

The invention relates to an isolated nucleic acid comprising at least 10 contiguous nucleotides of any of the 233 polynucleotide sequences given in the specification, or its complement. The nucleic acids encode cancer-associated proteins. Also included are an expression vector. Comprising the above tecombinant nucleic acid or expression vector, a microarray for detecting comprising at least 10 contiguous nucleotides of any of the above comprising at least 10 contiguous nucleotides of any of the above comprising at least 10 contiguous nucleotides of any of the above comprising at least 10 contiguous nucleotides of any of the above.

CC emplement an isolated antibody (or its antigen binding fragment) that an isolated antibody, a pharmaceutical composition comprising the above polypeptide, a hybridoma that produces the above monoclonal antibody, a pharmaceutical composition comprising the above monoclonal antibody, a pharmaceutical composition comprising the above monoclonal antibody of the above polypeptide, a hybridoma that produces the above antibody and a pharmaceutical accipient, a kit for detecting cancer cells (comprising the presence or absence of cancer cells in an individual, a method for delivering a therapeutic agent to cancer cells in an individual, an electronic library comprising the above polypeptide (or their fragments), methods of screening for an individual, an electronic library comprising the above concer cells in an individual, an electronic library comprising the activity of a CA protein (CAP), methods for detecting cancer activity of a CA protein (CAP), methods for detecting cancer associated with expression of a polypeptide in a test cell sample, a method for transminance cells in an individual, an electronic library comprising the activity of a CA protein (CAP) methods seemed and a method for individual and reserved encourage and a method seemed and an electronic library encourage and a method for individual and reserved encourage and a method seemed and a method seemed and a method seeme
                                                                                                                                                                                                                              New isolated cancer-associated polynucleotides and polypeptides useful for diagnosing, preventing or treating cancers, especially lymphoma and leukemia, or in screening for agents that modulate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cancer. The present sequence is a human CAP protein sequence. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

The invention relaters to a novel ibolated nuclear and the propertice of antinflammatory, antiarthritic, antirheumatic, immunosuppressive, costeopathic, antidabetic, dermatological, antipportatic, antidabetic, dermatological, the PRO polypeptide, is agonist, antidaportation may have a use in gene therapy. The PRO polypeptide, is agonist, antidaportation in mamune related disorder such as cystemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, include chronic arthritis, a spondyloarthropathy, systemic solerosis, an idiopathic inflammatory myopathy, Sjogran's syntemic solerosis, antoinmune haemolytic anaemia, autoinmune haemolytic anaemia, autoinmune con finance, immune-mediated renal disease, a demyellnating disease of the central or peripheral nervous system, idiopathic demyellnating polyneuropathy, Guillain-Barre syndrome, a chronic inflammatory demyellnating polyneuropathy, a hepatobiliary disease, infectious or autoinmune chronic active hepatitis, primary cliniammatory bowel disease, granulomatous hepatitis, solerosing cholangitis, inflammatory bowel disease, granulomatous hepatitis, solerosing cholangitis, inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's colisease, asthma, allergic rhinitis, atopic dermatitis, sociasis, an allergic chimitis, atopic dermatitis, poorlasis, or presensitivity, urticaria, an immunologic disease, graft rejection or content of sease, spake, an autoimmune content disease, graft rejection or content of sease, graft rejection or serversents a properson or serversents a properson or serversents and season of the lung.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      erythematosus, rheumatoid arthritis, diabetes mellitus, immune-mediated renal disease, or demyelinating diseases of the central or peripheral

Treating hereditary lymphoedema comprises identifying a human subject with lymphoedema and with a mutation in at correlates with lymphoedema in where the mutation correlates with lymphoedema in bujects, and with the proviso that the LEC protein is not VEGRA-3; and administering to the subject a composition comprising a lymphatic growth agent selected from VEGF-C or VEGF-D polypeptides and polynucleotides. The invention may be useful for the development of compounds with an antiangiogenic, cytostatic, vasotropic or antinilammatory activity or for gene therapy. The method is useful in modulating the growth or differentiation of blood endothelial cells or lymphatic endothelial cells, in treating hereditary

predisposition to the disorder or in monitoring the efficacy or toxicity of a drug on endothelial cells. The agent is useful in manufacturing a medicament for the differential modulation of blood vessel endothelial cell prowth or differentiation. The lymphatic growth agent may also be used in manufacturing a medicament for the treatment of hereditary lymphoedema resulting from a mutation in a LEC gene or of other diseases involving the lymphatic vessels, such as various inflammatory diseases and cancer metactasis via the lymphatic system. The present sequence is that of a human LEC/BEC differentially expressed protein which is related to the method of the invention.Note: This sequence does not appear in the specification but was obtained by the indexer using the source data given in table 14 of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TL2; TRAIL; tumour necrosis related receptor; TR5; inflammation; arthritis; septicaemia; transplant rejection; autoimmune disease; inflammatory bowel disease; graft versus host disease; infection; stroke; ischaemia; acute respiratory disease syndrome; psoriasis; restenosis; brain injury; AIDS; bone disease; cancer; atherosclerosis; Alzheimer's disease; human; therapy; diagnosis; ligand.

```
This is the amino acid sequence of human TL2 (also known as TRAIL), which has newly been discovered to be a ligand of human tumour necrosis related receptor TR5 (see AAM7631). This TR5 polypeptide of the invention and TL2 can be used in screening processes for compounds which bind the receptor, or its ligand, and which activate (agonists) or inhibit (antagonists) the receptor or TL2. Treatment of a subject with the need to inhibit TR5 polypeptide activity comprises administering an antagonist to the polypeptide, administering a nucleic acid that inhibits the expression of the nucleotide sequence encoding the polypeptide and/or administering a polypeptide. The active agents can be used for the ligand, substrate or receptor. The active agents can be used for the creatment of chronic and acute inflammation, arthritis, septicaemia, autoimmune diseases (e.g. inflammatory bowel disease, psoriasis), creatment of chronic and acute inflammatory bowel disease, psoriasis), ischaemia, acute respiratory disease syndrome, restenosis, brain injury, atherosclerosis and Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180

polypeptide TL2 Sequence 279 AA;

The invention relates to identifying agonists or antagonists to tumour necrosis factor receptor (TNF-R) related polypeptides (TR1 and TR2, TL2 and TL4). The method comprises: (a) (i) contacting TR1 or TR2 with a candidate compound in the presence of TL2 or TL4; or (ii) contacting TL2 assessing the ability of the candidate compound to the presence of TR1 or TR2; and (b) assessing the ability of the candidate compound to compete with TR1 or TR2 binding to TL2 or TL4. TR and TL agonists and antagonists are useful for treating diseases caused by imbalance of TL or TR polypeptide levels, which cause; chronic and acute inflammation, arthritis, septicemia, autoimmune diseases, transplant rejection, graft vs. host disease, inflection, stroke, ischemia, acute respiratory disease syndrome, restenosis, brain injury, AIDS, bone diseases, cancer, athersclerosis and Alzabiner's disease. The present sequence represents a TNF-R related

Identifying agonists and antagonists to tumour necrosis factor receptor (TNP-R) related polypeptides (LR1, LR2, LT2 and LT4) - useful for treating stroke, Alzhelmer's disease and AIDS.

```

ADB61495

```
The invention relates to a novel human cytokine, designated Apo-2 ligand (Apo-2L). The Apo-2L polypeptide can be produced by standard recombinant methodology. Apo-2L is useful for inducing apoptosis in mammalian cancer cells. This is useful for the treatment of cancer. Apo-2L can be used to induce apoptosis for pathological conditions characterized by decreased levels of apoptosis, e.g. autoimmune disorders like lupus and immunemediated glomerular nephritis and cancer. Apo-2L and its nucleic acid coding sequence can also be used in quantitative and screening disposit techniques. Anti-Apo-2L antibodies can be used for treating diseases associated with increased apoptosis. Sequences Approxice 19 represent specific examples of Apo-2L variants. Note: This sequence is not provided in the specification. It has been created by modifying the wild-type Apo-2L sequence provided in Fig 1A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180

The invention relates to a novel isolated Apo-2 ligand variant polypeptide having a sequence that differs from the native sequence to polypeptide having a sequence that differs from the native sequence complex and all and a polypeptide having substitutions at the polypeptide having the substitutions at the polypeptide having the substitutions and at the polypeptide having the substitutions and at the polypeptide having the substitutions and at the cresidue position is, outside of the receptor contact region of the respitue position is, outside of the receptor contact region of the respitue position is, outside of the receptor contact region of the respitue position is, outside of the receptor contact region of the CRS. Apo2L compositions have the following activities of the DRS. Apo2L compositions have the following activities cypeptide, and further compositions have the following activities cypeptide, and and ruther composition or an Apo-2 ligand variant polypeptide, and and ruther composition or an Apo-2 ligand variant polypeptide, contacting apoptosis in mammalian cells, by exposing mammalian cells are expressing a receptor selected from DR4 receptor and DR5 receptor to a therapeutically effective amount of the Apo-2 ligand variant polypeptide, colon or colorectal cancer cells. The Apo-2 ligand variant polypeptide, colon or colorectal cancer cells. The Apo-2 ligand variant polypeptide, colon or colorectal cancer cells. The Apo-2 ligand variant polypeptide, colon or colorectal cancer cells. The Apo-2 ligand variant polypeptide, and anthrities or multiple sclerosis) in a mammal, by administering to the mammal an effective amount of the Apo-2 ligand variant polypeptide, Apo-2 ligand composition or the mammal and effective amount of the Apo-2 ligand variant polypeptide, Apo-2 ligand composition or the mammal and effective amount of the Apo-2 ligand variant polypeptide, Apo-2 ligand composition or the mammal and the sequence represents the human Apo-2 ligand variant polypeptide, Apo-2 ligand variant polypeptide, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated Apo-2 ligand variant polypeptide useful for treating cancer or an immune-related disease such as multiple sclerosis, comprises amino acid substitutions in the native sequence of the Apo-2 ligand.
                                                                                                                                                                                Apo-2 ligand; DRS.Apo2L complex; receptor contact region;

The Apo-2 ligand variant polypeptide is selected from a polypeptide having substitutions at

cc residue positions identified from x-ray crystal structure of the DBS.Apo2L complex. The polypeptide having the substitutions made at residue position(s) selected from 20 positions such as 596C, 5101C, 5111C, V114C, R115C, E116C, M134C, M140C, E144C, M152C, S153C, R170C, R170K, R170S, K179C, D234C, E249C, R255C, E263C, H264C, such that the residue position is, outside of the receptor contact region of the CRS.Apo2L complex, and displays high solvent accessibility in the crystal structure of the DRS.Apo2L complex. The Apo-2 ligand variant polypeptide and further compositions have the following activities: cytostatic, and and neuroprotective. The Apo-2 ligand variant polypeptide, an Apo-2 ligand composition or an Apo-2 ligand trimer are useful for inducing apoptosis in mammalian cells, by exposing mammalian cells expressing a receptor selected from DR4 receptor and DR5 receptor to a therapeutically effective amount of the Apo-2 ligand variant polypeptide, the Apo-2 ligand composition or the Apo-2 ligand trimer is useful for the Apo-2 ligand composition or the Apo-2 ligand trimer is useful for the Apo-2 ligand sariant polypeptide, colon or colorectal cancer cells. The Apo-2 ligand trimer is useful for the Apo-2 ligand sariant by administering to the mammal an effective amount of the Apo-2 ligand composition or Apo-2 ligand composition or Apo-2 ligand composition or Apo-2 ligand cummant E263C trimer. This secuence represents the human Apo-2 ligand mitant E263C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RVAAHITGTRGRSWTLSSPNSKNEKALGRKINSWESSRSGHSFLSNLHLRNGELVIHEKG 180

The invention relates to a novel isolated Apo-2 ligand variant polypeptide having a sequence that differs from the native sequence blaving 281 amino acids given in specification. The Apo-2 ligand variant polypeptide is selected from a polypeptide having substitutions at cesidue positions identified from x-ray crystal structure of the DRS.Apo2L complex. The polypeptide having the substitutions made at cesidue position(s) selected from 20 positions such as 596C, $101C, $111C, $114C, $115C, $116C, $114C, $115C, $153C, $101C, $111C, $114C, $115C, $116C, $111C, $114C, $115C, $115C, $116C, $11CC, $116C, $11CC, $116C, $11CC, $116C, $11CC, $116C, $11CC, $11CC, $116C, $11CC, $116C, $11CC, $116C, $11CC, $116C, $11CC, $11CC,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated Apo-2 ligand variant polypeptide useful for treating cancer or an immune-related disease such as multiple sclerosis, comprises amino acid substitutions in the native sequence of the Apo-2 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Apo-2 ligand, DR5.Apo2L complex; receptor contact region; high solvent accessibility; cytostatic; antiarthritic; neuroprotective; trimer; apoptosis; DR4 receptor; DR5 receptor; colon; colorectal cancer; lung; breast; immune-related disease; arthritis; multiple sclerosis; human; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note= "Native residue of Glu is substituted by Cys"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human Apo-2 ligand protein mutant E249C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Location/Qualifiers
                                                                                                                                                                                                                                                                                  ADB61492 standard; protein; 281 AA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a novel isolated Apo-2 ligand variant polypeptide having a sequence that differs from the native sequence polypeptide having a sequence that differs from the native sequence comparing a sequence that differs from the native sequence comparing a sequence comparing the substitutions at the polypeptide having the substitutions at the polypeptide having the substitutions at comparing the substitutions at the polypeptide having the substitutions at the comparing the substitutions at the comparing the substitutions at the polypeptide having the substitution of the composition is, outside of the receptor contact region of the constitution is, outside of the receptor contact region of the constitution of the DRS. Apo2L complex. The Apo-2 ligand variant polypeptide, and further compositions have the following activities of the properties of the proposition or an Apo-2 ligand variant polypeptide, and apo-2 ligand composition or an Apo-2 ligand variant polypeptide, contacting apoptosis in mammalian cells. Wherever, the mammalian cells are colon or colorectal cancer cells. The Apo-2 ligand variant polypeptide, colon or colorectal cancer cells. The Apo-2 ligand variant polypeptide, colorectal cancer cells. The Apo-2 ligand variant polypeptide, colorectal cancer (such as arthritis or multiple sclerosis) in a commune related disease (such as arthritis or multiple sclerosis) in a commune. This sequence represents the human Apo-2 ligand cumposition or the mammal an effective amount of the Apo-2 ligand composition, worked the mammal an effective amount of the Apo-2 ligand composition or the mammal an effective amount of the Apo-2 ligand composition or the mammal and colorectal cancer (such as arthritis or multiple sclerosis) in a community of the human Apo-2 ligand composition or the human Apo-2 ligand composition or the human Apo-2 ligand composition or the human Apo-2 liga
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel isolated Apo-2 ligand variant polypeptide useful for treating cancer or an immune-related disease such as multiple sclerosis, comprises amino acid substitutions in the native sequence of the Apo-2 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  specification. mammal, by administering to the mammal an effective amount of the Apo-2 ligand variant polypeptide, Apo-2 ligand composition or Apo-2 ligand trimer. This sequence represents the human Apo-2 ligand mutant E249C protein of the invention. NOTE: This sequence is not shown in the specification. It has been created from information provided in claim 1 and from the sequence in Fig 1 of the specification.

The specification describes the use a polypeptide corresponding to at least the primary sequence of part of the present sequence to produce a diagnostic, probhylatic or therapeutic composition useful in cases of degenerative, autoimmune and inflammatory diseases. The polypeptides can be used in treatment of neurodegenerative disease, lupus erythematosus, rhuematoid arthritis, and SEP. The polypeptides are apoptoric in central nervous system cells, antigenic and specifically recognise the surface receptor of the TRAIL protein. The polypeptide is a marker of disease and a therapeutic target, e.g. its apoptotic activity can be blocked with an anti-TRAIL antibody or a TRAIL equivalent that binds to specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

```

Apo-2 ligand; DR5.Apo2L complex; receptor contact region;

```
The present invention relates to the preparation and use of attenuated tumour-targetted bacteria, such as, e.g., Salmonella, as a vector for the tumour-targetted bacteria, such as, e.g., Salmonella, as a vector for the delivery of one or more primary effectors molecules and secondary effector molecules to the site of a solid tumour. The primary effector molecules of the invention include members of the tumour necrosis factor (TNF), anti-anglogenic factors, cytotoxic polypeptides and tumour inhibitory enzymes. They induce a local immune response at the site of the tumour that results in the inhibition of growth of a tumour or tumour cells. The primary effector molecules are used for the treatment of solid tumours cuch as carcinomas, melanomas, lymphomas, sarcomas or metastases derived from these tumours. The present sequence is OmpA signal peptide to the amino of TRAIL) fusion protein. The fusion of OmpA signal peptide to the aminot terminus of TRAIL effector molecule enhances the periplasmic localisation and subsequent processing of the effector molecule. ```
The invention relates to a novel isolated Apo-2 ligand variant polypeptide having a sequence that differs from the native sequence polypeptide having a sequence that differs from the native sequence compared as a sequence that differs from the native sequence compared as a sequence of the polypeptide is selected from x-ray crystal structure of the DRS.Apo2L complex. The polypeptide having the substitutions and at the polypeptide having the substitutions made at residue position(s) selected from 20 positions such as S96C, S101C, R170K, R170S, K179C, E249C, R255C, E263C, H264C, such that the residue position is, outside of the receptor contact region of the DRS.Apo2L complex. The Apo-2 ligand variant polypeptide and further compositions have the following activities: cytostatic, and neuroprotective. The Apo-2 ligand variant polypeptide and further composition or an Apo-2 ligand variant polypeptide, an Apo-2 ligand composition or an Apo-2 ligand trimer are useful for inducing apoptosis in mammalian cells, by exposing mammalian cells captured the apoptosis in mammalian cells. The Apo-2 ligand variant polypeptide, therapeutically effective amount of the Apo-2 ligand variant polypeptide. Apo-2 ligand composition or Apo-2 ligand trimer. The mammalian cells are colon or coloner and apo-2 ligand trimer. The mammalian cells for the colon or coloner and apple the coloner coloner coloner and apple the coloner coloner coloner and apple the coloner coloner coloner and apple the coloner coloner coloner coloner and the coloner coloner coloner coloner and coloner c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel human cytokine, designated Apo-2 ligand (Apo-2L). The Apo-2L polypeptide can be produced by standard recombinant methodology. Apo-2L is useful for inducing apoptosis in mammalian cancer cells. This is useful for the treatment of cancer. Apo-2L can be used to induce apoptosis for pathological conditions characterized by decreased levels of apoptosis, e.g. autoimmune disorders like lupus and immune-mediated apomerular nephritis and cancer. Apo-2L and its nucleic acid coding sequence can also be used in quantitative and screening disagnostic techniques. Anti-Apo-2L antibodies can be used for treating diseases associated with increased apoptosis. Sequences AAS7016-19 represent specific examples of Apo-2L variants. Note: This sequence is not provided in the specification. It has been created by modifying the wild-type Apo-2L sequence provided in Fig 1A

The invention relates to a novel human cytokine, designated Apo-2 ligand (Apo-21). The Apo-21 polypeptide can be produced by standard recombinant methodology. Apo-21 is useful for inducing apoptosis in mammalian cancer cells. This is useful for the treatment of cancer. Apo-21 can be used to induce apoptosis for pathological conditions characterized by decreased induce apoptosis, eg. autoimmune disorders like lupus and immune mediated glomerular nephritis and cancer. Apo-21 and its nucleic acid coding sequence can also be used in quantitative and screening diagnostic

techniques. Anti-Apo-2L antibodies can be used for treating diseases associated with increased apoptosis. Sequences AAY27016-19 represent specific examples of Apo-2L variants. Note: This sequence is not provided in the specification. It has been created by modifying the wild-type Apo-2L sequence provided in Fig 1A

cells. This is useful for the treatment of cancer. Apo-2L can be used to induce apoptosis for pathological conditions characterized by decreased levels of apoptosis, e.g. autoimmune disorders like luques and immunementated glomerular nephritis and cancer. Apo-2L and its nucleic acid coding sequence can also be used in quantitative and screening diagnostic techniques. Anti-Apo-2L antibodies can be used for treating diseases associated with increased apoptosis. Sequences AX27016-19 represent specific examples of Apo-2L variants. Note: This sequence is not provided in the specification. It has been created by modifying the wild-type Apo-2L sequence provided in Fig 1A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 DDSYWDPNDEESMNSPCWQVKWQLRQLVRKMILRTSEETISTVQEKQQNISPLVRERGPQ 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180

The present invention relates to the isolation of cDNA encoding human tumour related apoptosis inducing ligand (Trail), and the Trail protein. The Trail full length cDNA is cloned, and is utilised to create a Trail prokaryotic expression system. The full length Trail cDNA is used to respectively clone cDNA of soluble ectocytic segment Traillo9 and Trail 114, and respectively create Traill09 cDNA and Traill14 cDNA prokaryotic expression systems. The prokaryotic expression systems created greatly increase the expression and quantity of the Trail, Traill09, and Traill14 proteins, and may be useful in a new preparation for killing tumour cells. The present sequence represents the full length human Trail
                                                                                                                                                                                                                                                                                                                                                                              DDSYWDPNDEESMNSPCWQVKWQLRQLVRKMILRTSEETISTVQEKQQNISPLVRERGPQ 120

The invention discloses isolated, naturally occurring, polypeptide splice variants of human tumour necrosis factor (TNF)-related apoptosis inducing ligand (TRAIL). Apoptosis, or programmed cell death, occurs during normal cellular differentiation and development of multicellular organisms.

Collular differentiation and development of multicellular organisms.

Collular differentiation and development of multicellular organisms.

Collo referred to as Apo-2 ligand, Apo-2L). TRAIL is a type II membrane protein which induces apoptosis and nuclear factor-B (NF-B) activation in many tissues and cells. Receptors for TRAIL include two death domain containing receptors, DR4 and DR5, as well as two decoy receptors, DCRI and DCR2, lacking the intracellular signalling death domain. TRAIL included by type I interferons, induces apoptosis in tumour cells, whereas normal cells are relatively resistant without showing significant toxic and boxy. Thus, TRAIL has the potential to be a very useful cantitumour agent. The naturally occurring splice variants may differ in their cellular distribution, expression levels/timing and activity.

Collectrining these factors could provide possible mechanisms for the induction of apoptosis of tumours cells. The splice variant polypeptides and polyuncleotides can be used in gene therapy, to raise antibodies, to detect the levels, distribution and ratios of expression of TRAIL, and its splice variants, in a biological sample and to identify compounds which bind the variant TRAIL products and modulate its activity (agonists and antagonists). Pharmaceutical compositions, comprising an expression vector or any of the amino acid sequences, are useful for causing a cyctotoxic effect in cancer cells and for treatment of diseases which can the antibodies may also have a therappeutic the amino acid sequences, are useful for causing and expression of sequences. The amino acid sequences, diseases that may be treated include cancer, neurodegenerative cutility in blocking or decreasing the ameliorated, res
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DDSYWDPNDEESMNSPCWQVKWQLRQLVRKMILRTSEETISTVQEKQQNISPLVRERGPQ 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DDSYMDPNDEESMNSPCWQVKWQLRQLVRKMILRTSEETISTVQEKQQNISPLVRERGPQ 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diseases, autoimmune diseases, diseases involved in the non-normal development of tissues and aging. TRAIL's gene is located on chromosome 326. The sequence presented is the human TNF-related apoptosis inducing ligand (TRAIL) splice variant 8, rpl-6-6, protein which has had an C-terminal section of the conserved TNF domain deleted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                New splice variants of tumor necrosis factor-related apoptosis inducing ligand (TRAIL) isolated from B-lymphocytes and liver, useful to treat diseases or disorders associated with low expression of the variants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MAMMEVQGGPSLGQTCVLIVIFTVLLQSLCVAVTYVYFTNELKQMQDKYSKSGIACFLKE

The invention relates to a novel isolated Apo-2 ligand variant polypeptide, comprising a sequence that differs from the native sequence Apo-2 ligand bolypeptide sequence comprising 282 amino acids and having one or more following amino acid substitutions at the residue positions comprising S96C, S101C, S111C, R170C or K179C. Also disclosed is an isolated nucleic acid molecule comprising DNA encoding the Apo-2 ligand variant polypeptide. Further disclosed are a composition comprising the Apo-2 ligand variant polypeptide, a method of treating cancer, and a method of inducing apoptosis in mammalian cells. The Apo-2 ligand variant polypeptide is useful for preparing a composition for treating cancer or immune-related disease, e.g., arthritis or multiple sclerosis. The current sequence represents a human Apo-2 ligand mutant. Note: This sequence is not found in the specification, but may be created using the wild-type Apo-2 ligand sequence given in ADK72296.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DDSYMDPNDEESMNSPCWQVKWQLRQLVRKMILRTSEETISTVQEKQQNISPLVRERGPQ 120

The invention relates to a novel isolated Apo-2 ligand variant polypeptide, comprising a sequence that differs from the native sequence Apo-2 ligand polypeptide sequence comprising 282 amino acids and having one or more following amino acid substitutions at the residue positions comprising S96C, S101C, S111C, R170C or K179C. Also disclosed is an isolated nucleic acid molecule comprising DNA encoding the Apo-2 ligand variant polypeptide. Further disclosed are a composition comprising the Apo-2 ligand variant polypeptide, a method of treating cancer, and a method of inducing apoptosis in mammalian cells. The Apo-2 ligand variant polypeptide is useful for preparing a composition for treating cancer or immune-related disease, e.g., arthritis or multiple sclerosis. The current sequence represents a human Apo-2 ligand mutant. Note: This sequence is not found in the specification, but may be created using the wild-type Apo-2 ligand sequence given in ADK72296.
             New Apo-2 ligand variant polypeptide, useful for preparing a composition for treating cancer or immune-related disease, e.g., arthritis or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel isolated Apo-2 ligand variant polypeptide, comprising a sequence that differs from the native sequence Apo-2 ligand bolypeptide sequence comprising 282 amino acids and having one or more following amino abstitutions at the residue positions comprising 596c, S101C, S111C, R170C or K179C. Also disclosed is an isolated nucleic acid molecule comprising DNA encoding the Apo-2 ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cytostatic; antiarthritic; neuroprotective; gene therapy; Apo-2 ligand; variant; cancer; immune system disease; arthritis; multiple sclerosis; human; mutein.

ö
variant polypeptide. Further disclosed are a composition comprising the Apo-2 ligand variant polypeptide, a method of treating cancer, and a method of inducing apoptosis in mammalian cells. The Apo-2 ligand variant polypeptide is useful for preparing a composition for treating cancer or immune-related disease, e.g., arthritis or multiple sclerosis. The current sequence represents a human Apo-2 ligand mutant. Note: This sequence is not found in the specification, but may be created using the wild-type Apo-2 ligand sequence given in ADK72296.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120

The invention relates to a novel isolated Apo-2 ligand variant polypeptide, comprising a sequence that differs from the native sequence Apo-2 ligand bollypeptide sequence comprising 382 amino acids and having one or more following amino acids substitutions at the residue positions comprising S96C, S101C, S111C, R170C or K179C. Also disclosed is an isolated nucleic acid molecule comprising DNA encoding the Apo-2 ligand variant polypeptide. Further disclosed are a composition comprising the Apo-2 ligand variant polypeptide, a method of treating cancer, and a method of inducing apoptosis in mammalian cells. The Apo-2 ligand variant polypeptide is useful for preparing a composition for treating cancer or immune-related disease, e.g., arthritis or multiple sclerosis. The current sequence represents a human Apo-2 ligand mutant. Note: This sequence is not found in the specification, but may be created using the wild-type Apo-2 ligand sequence given in ADK72296.
                                                                                                 New Apo-2 ligand variant polypeptide, useful for preparing a composition for treating cancer or immune-related disease, e.g., arthritis or
